

Man in the Middle Attack (MITM) using Xerosploit

Ahmed Luhar, Cybersecurity Specialist, CryptoGuard Inc.

What is Xerosploit?

The logo for Xerosploit is displayed in a large, white, pixelated font against a dark background. The text reads "XEROSPLOIT".

[+]===== [Author : @LionSec1  Website: www.neodrix.com]===== [+]

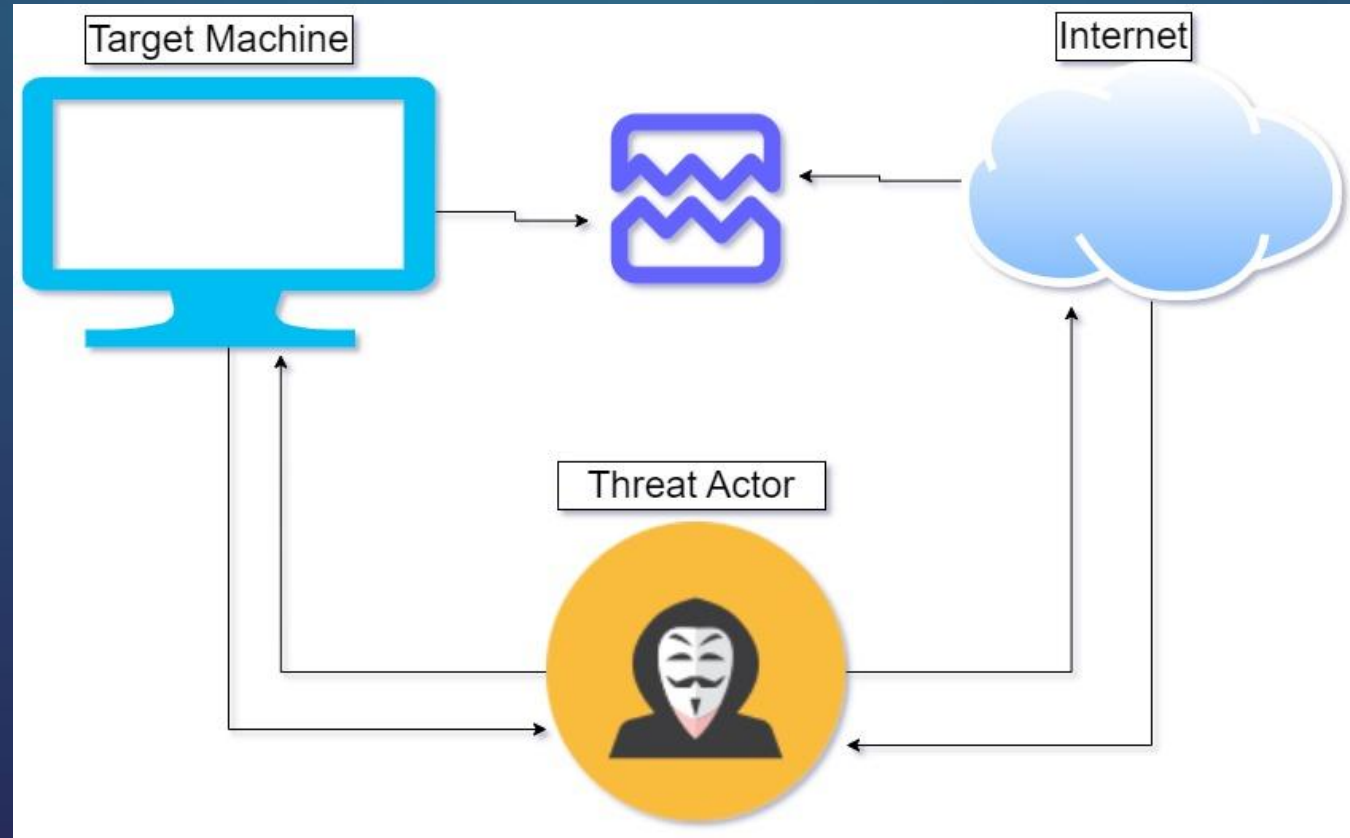

Information

XeroSploit is a penetration testing toolkit whose goal is to perform man in the middle attacks for testing purposes. It brings various modules that allow to realise efficient attacks. This tool is Powered by Bettercap and Nmap.

Dependencies of Xerosploit

How it works

The Sniff Module

sniff : Capturing information inside network packets

- Allows the user to intercept the network traffic from a specified target in a subnet.
- Stores the data in a specified folder that is listed on the interface.
- Also offers to save the log as a pcap file.

The SSL Strip Option

```
[+] Do you want to load sslstrip ? (y/n).
```

- Attempts to downgrade HTTPS traffic from the target machine.

Lets go to the
DEMO!

THANK YOU and closing remarks.
